

Download instructions

For Mac:

- Download the latest .dmg file
- Install
 - It will be mounted as another disk in your system
 - Note: will take a few minutes to install
- Copy IntelliJ IDEA to your Applications folder
- Open IntelliJ from the Applications folder

For Windows:

- Download the latest .exe file
- Run the idea-idea-2018.1.1.exe file that starts the Installation Wizard.
 - Follow all steps suggested by the wizard to setup IntelliJ.
 - It will take a few minutes to download
- Run IntelliJ after download complete

For Linux:

- Download the latest .tar.gz file
- Unpack the .tar.gz file by running: `tar -xzf <filename>.tar.gz`
- Run `idea.sh` from the bin subdirectory.

First time setup

Default setup:

- Do not import settings when opening IntelliJ
- Accept IntelliJ Idea User License Agreement
- Choose Skip Remaining and Set Defaults when opening IntelliJ for first time
- Can choose to not show tips on startup

Setup Java SDK:

- Go to: File -> Project Structure
- Look for Platform Settings on left-hand side of menu. Select SDKs
- Then click on the '+' sign to add a new SDK and then select option 'JDK'
- Navigate to directory where the JDK was downloaded and select
- Then press apply and ok in the IntelliJ menu
